

BACKEND ARCHITECTURE

INFORMATION

On here i create a diagram of my backend architecture. It use a monolitch architecture where i use PostgreSQL in the database.

It have three service:

1. User Service - User Resolvers(Login, Auth, ConfirmEmail, ForgotPassword and Logout)
2. History Service - History Resolvers(History of speed connection and History of Ip searched)
3. Account Service - Account Resolvers(Profile of the user and IP of the user)
